

How to prevent certain products/categories from updating prices

There is a function in the POS that allows you to prevent certain categories from updating when executing an 'Update Stock and Prices' function.

Go to the Stock tab, then select 'Categories' and select the category you wish to not update, navigate to the bottom and untick the 'Include in Update Stocks and Prices'

Alternatively, if you want to stop specific individual products from updating their prices when you run the next 'Update Stock and Prices' function.

Navigate to the Stock and then select Products, scan the barcode of your desired product or find it using the filters on the top (By Form), once the product is selected, go to the 'Stock' tab and deselect 'Include in Update Stock and Prices'.
